            <key>description</key>
            <string>Trebuchet, designed by Vincent
Connare in 1996, is a humanist sans serif designed for easy screen readability.
Trebuchet takes its inspiration from the sans serifs of the 1930s which had
large x heights and round features intended to promote readability on signs. The
typeface name is credited to a puzzle heard at Microsoft, where the question was
asked, "could you build a Trebuchet (a form of medieval catapult) to launch a
person from the main campus to the consumer campus, and how?" The Trebuchet
fonts are intended to be the vehicle that fires your messages across the
Internet. "Launch your message with a Trebuchet page".</string>

      <key>description</key>
      <string>The Wingdings fonts were designed by
Kris Holmes and Charles Bigelow in 1990 and 1991.

The fonts were originally named Lucida Icons, Arrows, and Stars to complement
the Lucida text font family by the same designers. Renamed, reorganized, and
released in 1992 as Microsoft Wingdings, the three fonts provide a harmoniously
designed set of icons representing the common components of personal computer
systems and the elements of graphical user interfaces.

There are icons for PC, monitor, keyboard, mouse, trackball, hard drive,
diskette, tape cassette, printer, fax, etc., as well as icons for file folders,
documents, mail, mailboxes, windows, clipboard, and wastebasket. In addition,
Wingdings includes icons with both traditional and computer significance, such
as writing tools and hands, reading glasses, clipping scissors, bell, bomb,
check boxes, as well as more traditional images such as weather signs, religious
symbols, astrological signs, encircled numerals, a selection of ampersands and
interrobangs, plus elegant flowers and flourishes.

Pointing and indicating are frequent functions in graphical interfaces, so in
addition to a wide selection of pointing hands, the Wingdings fonts also offer
arrows in careful gradations of weight and different directions and styles. For
variety and impact as bullets, asterisks, and ornaments, Windings also offers a
varied set of geometric circles, squares, polygons, targets, and stars.</string>

      <key>description</key>
      <string>Arie de Ruiter, who in 1995 was Head
of Information Technology Development at Elsevier Science, made a proposal to
the STI Pub group, an informal group of publishers consisting of representatives
from the American Chemical Society (ACS), American Institute of Physics (AIP),
American Mathematical Society (AMS), American Physical Society (APS), Elsevier,
and Institute of Electrical and Electronics Engineers (IEEE). De Ruiter
encouraged the members to consider development of a series of Web fonts, which
he proposed should be called the Scientific and Technical Information eXchange,
or STIX, Fonts. All STI Pub member organizations enthusiastically endorsed this
proposal, and the STI Pub group agreed to embark on what has become a twelve-
year project. The goal of the project was to identify all alphabetic, symbolic,
and other special characters used in any facet of scientific publishing and to
create a set of Unicode-based fonts that would be distributed free to every
scientist, student, and other interested party worldwide. The fonts would be
consistent with the emerging Unicode standard, and would permit universal
representation of every character. With the release of the STIX fonts, de
Ruiter's vision has been realized.</string>

```

    <key>description</key>
    <string>Helvetica (Latin for Swiss) has the
objective and functional style which was associated with Swiss typography in the
1950s and 1960s. It is perfect for international correspondence: no ornament, no
emotion, just clear presentation of information. Helvetica is still one of the
best selling sans-serif fonts.</string>

```

<key>description</key>

<string>The Helvetica Font Family is part of the Linotype Originals. Helvetica is one of the most famous and popular typefaces in the world. It lends an air of lucid efficiency to any typographic message with its clean, no-nonsense shapes. The original typeface was called Neue Haas Grotesk, and was designed in 1957 by Max Miedinger for the Haas'sche Schriftgiesserei (Haas Type Foundry) in Switzerland. In 1960 the name was changed to Helvetica (an adaptation of "Helvetia", the Latin name for Switzerland). Over the years, the Helvetica family was expanded to include many different weights, but these were not as well coordinated with each other as they might have been. In 1983, D. Stempel AG and Linotype re-designed and digitized Neue Helvetica and updated it into a cohesive font family. At the beginning of the 21st Century, Linotype again released an updated design of Helvetica, the Helvetica World typeface family. This family is much smaller in terms of its number of fonts, but each font makes up for this in terms of language support. Helvetica World supports a number of languages and writing systems from all over the globe</string>

      <key>description</key>
      <string>Arie de Ruiter, who in 1995 was Head
of Information Technology Development at Elsevier Science, made a proposal to
the STI Pub group, an informal group of publishers consisting of representatives
from the American Chemical Society (ACS), American Institute of Physics (AIP),
American Mathematical Society (AMS), American Physical Society (APS), Elsevier,
and Institute of Electrical and Electronics Engineers (IEEE). De Ruiter
encouraged the members to consider development of a series of Web fonts, which
he proposed should be called the Scientific and Technical Information eXchange,
or STIX, Fonts. All STI Pub member organizations enthusiastically endorsed this
proposal, and the STI Pub group agreed to embark on what has become a twelve-
year project. The goal of the project was to identify all alphabetic, symbolic,
and other special characters used in any facet of scientific publishing and to
create a set of Unicode-based fonts that would be distributed free to every
scientist, student, and other interested party worldwide. The fonts would be
consistent with the emerging Unicode standard, and would permit universal
representation of every character. With the release of the STIX fonts, de
Ruiter's vision has been realized.</string>

```

```
      <string>Arie de Ruiter, who in 1995 was Head
of Information Technology Development at Elsevier Science, made a proposal to
the STI Pub group, an informal group of publishers consisting of representatives
from the American Chemical Society (ACS), American Institute of Physics (AIP),
American Mathematical Society (AMS), American Physical Society (APS), Elsevier,
and Institute of Electrical and Electronics Engineers (IEEE). De Ruiter
encouraged the members to consider development of a series of Web fonts, which
he proposed should be called the Scientific and Technical Information eXchange,
or STIX, Fonts. All STI Pub member organizations enthusiastically endorsed this
proposal, and the STI Pub group agreed to embark on what has become a twelve-
year project. The goal of the project was to identify all alphabetic, symbolic,
and other special characters used in any facet of scientific publishing and to
create a set of Unicode-based fonts that would be distributed free to every
scientist, student, and other interested party worldwide. The fonts would be
consistent with the emerging Unicode standard, and would permit universal
representation of every character. With the release of the STIX fonts, de
Ruiter's vision has been realized.</string>

```
        <key>description</key>
        <string>The Didot family were active as
designers for about 100 years in the 18th and 19th centuries. They were
printers, publishers, typeface designers, inventors and intellectuals. Around
1800 the Didot family owned the most important print shop and font foundry in
France. Pierre Didot, the printer, published a document with the typefaces of
his brother, Firmin Didot, the typeface designer. The strong clear forms of
this alphabet display objective, rational characteristics and are representative
of the time and philosophy of the Enlightenment. Adrian Frutiger's Didot is a
sensitive interpretation of the French Modern Face Didot. Another model for this
design is the Henriade, a historical printing of the original Didot from 1818.
```

The font Didot gives text a classic and elegant feel.</string>

            <key>description</key>
            <string>Trebuchet, designed by Vincent
Connare in 1996, is a humanist sans serif designed for easy screen readability.
Trebuchet takes its inspiration from the sans serifs of the 1930s which had
large x heights and round features intended to promote readability on signs. The
typeface name is credited to a puzzle heard at Microsoft, where the question was
asked, "could you build a Trebuchet (a form of medieval catapult) to launch a
person from the main campus to the consumer campus, and how?" The Trebuchet
fonts are intended to be the vehicle that fires your messages across the
Internet. "Launch your message with a Trebuchet page".</string>

      <key>description</key>
      <string>Monotype Drawing Office 1982. A
contemporary sans serif design, Arial contains more humanist characteristics
than many of its predecessors and as such is more in tune with the mood of the
last decades of the twentieth century. The overall treatment of curves is softer
and fuller than in most industrial-style sans serif faces. Terminal strokes are
cut on the diagonal which helps to give the face a less mechanical appearance.
Arial is an extremely versatile family of typefaces which can be used with equal
success for text setting in reports, presentations, magazines etc, and for
display use in newspapers, advertising and promotions.</string>

      <key>description</key>
      <string>Trebuchet, designed by Vincent
Connare in 1996, is a humanist sans serif designed for easy screen readability.
Trebuchet takes its inspiration from the sans serifs of the 1930s which had
large x heights and round features intended to promote readability on signs. The
typeface name is credited to a puzzle heard at Microsoft, where the question was
asked, "could you build a Trebuchet (a form of medieval catapult) to launch a
person from the main campus to the consumer campus, and how?" The Trebuchet
fonts are intended to be the vehicle that fires your messages across the
Internet. "Launch your message with a Trebuchet page".</string>

copyright (c) 1990 by Elsevier, Inc. All rights reserved.</string>
                <key>description</key>
                <string>Arie de Ruiter, who in 1995 was Head
of Information Technology Development at Elsevier Science, made a proposal to
the STI Pub group, an informal group of publishers consisting of representatives
from the American Chemical Society (ACS), American Institute of Physics (AIP),
American Mathematical Society (AMS), American Physical Society (APS), Elsevier,
and Institute of Electrical and Electronics Engineers (IEEE). De Ruiter
encouraged the members to consider development of a series of Web fonts, which
he proposed should be called the Scientific and Technical Information eXchange,
or STIX, Fonts. All STI Pub member organizations enthusiastically endorsed this
proposal, and the STI Pub group agreed to embark on what has become a twelve-
year project. The goal of the project was to identify all alphabetic, symbolic,
and other special characters used in any facet of scientific publishing and to
create a set of Unicode-based fonts that would be distributed free to every
scientist, student, and other interested party worldwide. The fonts would be
consistent with the emerging Unicode standard, and would permit universal
representation of every character. With the release of the STIX fonts, de
Ruiter's vision has been realized.</string>

            <key>description</key>
            <string>Monotype Drawing Office 1982. A
contemporary sans serif design, Arial contains more humanist characteristics
than many of its predecessors and as such is more in tune with the mood of the
last decades of the twentieth century. The overall treatment of curves is softer
and fuller than in most industrial-style sans serif faces. Terminal strokes are
cut on the diagonal which helps to give the face a less mechanical appearance.
Arial is an extremely versatile family of typefaces which can be used with equal
success for text setting in reports, presentations, magazines etc, and for
display use in newspapers, advertising and promotions.</string>
